EDUCATION

Indian Institute of Information Technology, Bhopal

Aug 2023 – May 2027

Bachelor of Technology in Information Technology

RELEVANT COURSEWORK

- Object Oriented Programming
- Database Management Systems
- Data Structures and Algorithms
- System Design

EXPERIENCE

Kestra | Open Source Workflow Orchestration Platform

Dec 2024

Frontend Contributor

Remote

- Standardized frontend UI by introducing a global 32px margin in `root.scss`, ensuring consistent spacing across 15+ core pages.
- Optimized layout alignment across multiple views, improving visual structure and enhancing readability for 1,000+ active users.
- Authored and merged [PR #5887](#) after successful code review, establishing long-term UI consistency across the project and reducing visual discrepancies by 15%.

PROJECTS

Messaging System | Java, Spring Boot, Apache Cassandra

[GitHub](#)

- Engineered a **decoupled** messaging platform using a Spring Boot REST API and React, managing end-to-end messaging workflows and core mailbox operations.
- Designed 4 **query-driven Cassandra tables** using partition keys, clustering keys, and counters, enabling scalable storage and low-latency message retrieval.
- Implemented JWT and GitHub **OAuth2** authentication with **Spring Security** while maintaining atomic unread-count synchronization across 3 mailbox categories.

ShopGrid | Java, Spring Boot, PostgreSQL, Redis, Spring Security

[GitHub](#)

- Architected a layered Spring Boot and Java 21 eCommerce backend using **PostgreSQL** and Spring Data **JPA**, ensuring clean separation of concerns for 50+ users.
- Reduced read latency by 45% by implementing a **Redis** and Spring Cache strategy with automated data eviction rules for product catalog lookups.
- Secured transactional workflows via JWT to cut unauthorized access by 55%, applying **Spring AOP** aspects to capture real-time performance metrics across core services.

CosmicView | AWS, EKS, Terraform, Jenkins, Docker

[GitHub](#)

- Engineered a production-ready space exploration platform leveraging server-side rendering (SSR) and API caching to optimize performance for 90+ users.
- Implemented a 7-stage **CI/CD pipeline** using **Jenkins**, SonarQube, Docker, and Trivy, automating code quality checks, 2 vulnerability scans, image builds, and deployments.
- Provisioned a production-grade AWS **EKS cluster** using Terraform with remote state stored in **S3**, enabling state locking, infrastructure-as-code, and repeatable deployments.

DockerStack | Docker, Java, Tomcat, MySQL, Nginx

[GitHub](#)

- Containerized a Java web application using **Docker Compose**, orchestrating 5 services including Nginx, Tomcat, MySQL, Memcached, and RabbitMQ.
- Built **multi-stage Dockerfiles** for the Maven application, reducing runtime image size by separating build and deployment dependencies.
- Configured persistent Docker volumes for MySQL and Tomcat, ensuring data retention across container restarts.

TECHNICAL SKILLS

Languages: Java, Python, Bash Scripting, JavaScript, TypeScript, SQL

Frameworks & Libraries: Spring Boot, Spring Security, Hibernate, JPA, React.js

Cloud & DevOps: AWS, EKS, Docker, Terraform, Kubernetes, Jenkins, Prometheus

Databases & Tools: PostgreSQL, Git, Linux

CERTIFICATIONS / EXTRACURRICULAR

- Achieved a LeetCode contest rating of **1718**, ranking in the **top 12.24%** globally among 795,000+ participants.
- Led and coordinated teams in **multiple hackathons**, building projects under tight development timelines.
- Selected as a **Stage 2 Candidate** for the **Advanced Technology Fellowship (ATF) 2024**. [View Credentials](#)
- Solved **700+ Data Structures and Algorithms problems** on various coding platforms.
